

Fluorescent Lamp Compactor Standard Lamp Compactor 110V

<https://www.bayteccontainers.com/lamp-compactor.html>

Features

- Description: Standard Lamp Compactor 110V
- Wt. (lbs.): 260.
- Reduces labor and storage costs
- Pulverizes fluorescent lamps in seconds
- Captures mercury vapors to protect the environment
- Fits onto a 55 gallon open-head steel drum (sold separately)
- Complies with OSHA, ACGIH, NIOSH, and European Clean-air standards

Lamp compactors provide an easy solution for disposing of fluorescent lamps while capturing dangerous mercury vapors in an activated carbon filter. 2" diameter receiving tube accepts any length lamp. Rear Tower accepts various size lamps. Each unit will pulverize approximately 1100 T12 lamps (even more T8's), filling the 55-gallon steel drum (sold separately). Both models are designed for use with a steel 55-gallon drum only. HEPA filtration guarantees superior air quality venting from the unit. Operates on 110V electric. 220V is available through special order.

Standard Lamp Compactor uses a 2-plex blade to pulverize CFL's (compact fluorescent lamps) and accepts any length fluorescent lamp tube and features a 27 1/2" H x 16" W x 3 3/4" D box located at the rear of the unit that accepts various size bulbs. CFL's are classified as universal waste.

Note: Prohibited for use in CA, VT, MN, MO, ME, CT, PA, NJ, RI and WV.
Facility permit required for use in NJ.
