## Analytical Standards for Medicinal and Recreational Cannabis Testing

While the legalization of cannabis, for both medicinal and recreational purposes, has been gaining speed, legislation and regulation has not necessarily kept pace. Even so, out of a drive for self-regulation and significant consumer safety concerns, many producers and manufacturers are turning to testing labs in order to ensure that their products are of high quality and free of chemical contaminants. SPEX CertiPrep offers ISO 17034 Certified Reference Materials (CRMs) for all of the common contaminants such as pesticide residues, residual solvents and heavy metals, as well as qualitative analysis CRMs such as terpenes. As the industry demands change and regulations are put into place, we continually update our product offerings.

**OdorEroder®**

OdorEroder® effectively neutralizes a wide range of offensive chemical odors and fumes in the lab, everything from Aldehydes to Xylene. These non-toxic, environmentally safe purple beads are placed where airborne odor-causing chemicals are most likely to pass near them. Compounds in the beads trap and chemically transform these odor-causing chemicals into harmless, scentless compounds that remain trapped within the beads. The efficacy of the beads is easily observed as they turn from purple to brown to facilitate the chemical reaction required to deodorize your workspace. When a majority of the beads have turned brown, it is time to replace the OdorEroder®. Depending on levels of exposure, the OdorEroder® lasts up to 3 months.

**OdorEroder® is effective in the following areas:**

Hoods • Waste Disposal Areas • Lab Benches • Chemical Storage Cabinets • Glove Boxes • Lab Refrigerators • Other Odor-Causing Areas within a Lab
