

Learning Management System (LMS)

“Geometry Series”

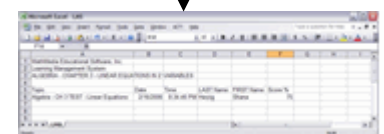

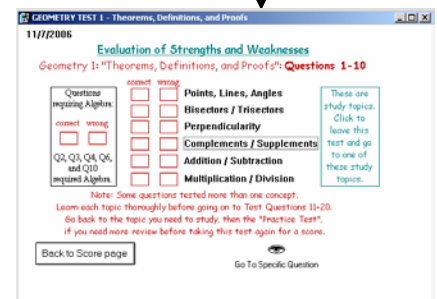

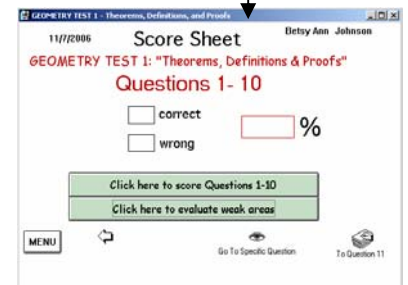

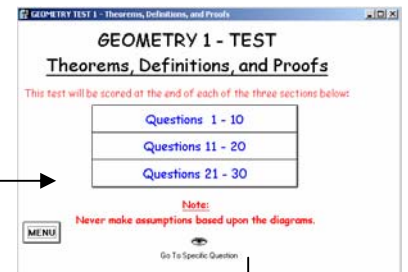

This is a 7-program series intended for full year High School Geometry students who have successfully completed the first year of high school algebra. Students will learn from the “body” of the program with instruction and interactive practice and step-by-step solutions. A practice test with hints and solutions prepares the student to take the “real” TEST for a score which is automatically recorded on the included database. Each program has its own test.

Learning sections contain instruction, examples, and practice problems with hints and complete step-by-step solutions. Different techniques and perspectives are used to explain complex concepts to accommodate different learning styles.

Students may take the Practice Test before or after studying the learning sections OR before or after taking the TEST for a recorded score. The flexibility is there for the teacher and students to maximize the learning environment.
