

HOME SENTINEL

The **HOME SENTINEL** by Aspectek is the industry's most advanced Indoor pest repellent product. With years of designing and technical breakthroughs, this product is simple and safe to operate.

This product does not use any poisons or chemicals to destroy pests. It is safe for humans, pets and also pests.

SAFETY:

1. Read these instructions before using this product.
2. Do not restrict airflow around the unit. Do not position behind furniture or curtains. For best effectiveness position in open space areas.
3. Do not attempt to open the unit beyond its functional use.
4. This pest repelling product is environmentally friendly, safe and harmless to pests and pets.

The **HOME SENTINEL** has multiple components using different scientific techniques to get rid of pests:

ULTRASONIC:

A high pressure ultrasonic sound that is only slightly audible to human ears. This pest repelling technique emits a disorienting pulse that startles and frightens away insects and rodents from your home or office. Your indoors are turned into a noisy place and the deterring noises ward off pests immediately.

IONIC:

Ions are electrically charged atoms and are common place throughout our atmosphere. Animals are naturally sensitive to negative ions. The ionic control mimics the electrical charge of an incoming storm throughout your entire establishment. Pests become confused, frightened and seek shelter. Ions also pull bacteria and odours out of the air so pests cannot smell or detect food sources.

ELECTROMAGNETIC:

Frequency signals traveling through your wires into your home can be detected by pests. The shifting frequency irritates rodent nervous systems while vibrations disturb insect receptors. Because the electromagnetic signals intermittently turn on and off every few seconds, pests are unable to build a tolerance and flee the area.

PRODUCT FEATURES INCLUDE:

Ultrasonic speakers
Electromagnetic repelling
Ionic purification
3 LED function status lights
Frequency range (20-75 kHz)
Light sensor
Direct plug-in
Smart Night light

DIRECT PLUG-IN

This is a plug and go product. Simply position the product in an open area outlet that is not hidden away for increase effectiveness.

SMART NIGHT LIGHT

when lighting drops to a certain level, the night light sensor conveniently turns on (light sensor setting must be on) and shuts off when the ambient light becomes brighter.

There are two switches (upper and lower) on the side:

UPPER SWITCH

OFF: turns off the automatic night light. {fig. 1}

SENSOR: turns on the automatic night light. {fig. 2}

CONT: switches on the night light continuously. {fig. 3}

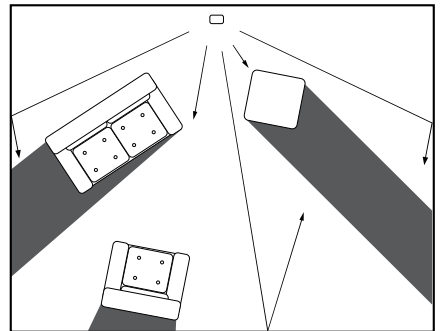

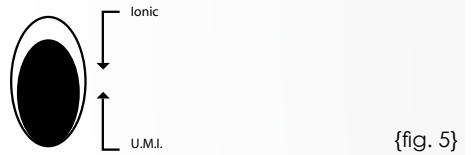

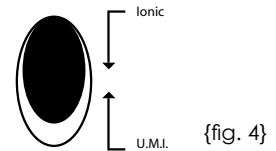

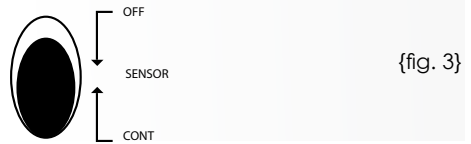

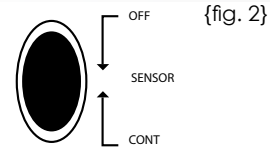

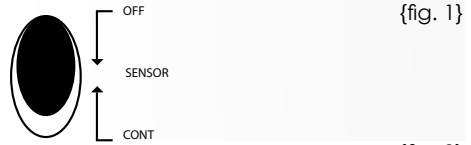

LOWER SWITCH

IONIC: turns on the ionic functions only. {fig. 4}

U.M.I.: turns on the ultrasonic, electromagnetic and ionic functions. {fig. 5}

POSITIONING THE PRODUCT:

For best results, make sure this product is positioned in an open area without soft material furniture in the way (ex: sofa, drapes, carpet etc..). Furniture that are made with soft materials absorb the ultrasonic waves that are produced by this product. Ultrasonic waves bounce off materials as it echoes through the room. As it cascades through the room, it will increase the coverage of the wave. {fig. 6}

OPENING UP THE PLACE

Because the ultrasonic waves cannot go through walls or doors it is strongly suggested that doors in the house are kept open for better effectiveness.

HIT THEM HARD

Do not abandon all other pest products after purchasing the **HOME SENTINEL**. Increase and continue with different types of pest control procedures and get rid of pests in no time.

PETS ARE PESTS?

position the product in areas of your home away from your pets. The frequencies of this product are in the hearing range of most rodent pets such as rabbits, mice, gerbils etc...

PRODUCT SPECIFICATIONS:

Power:

120Vac, 50/60Hz

Consumption:

maximum 8 Watts

Ultrasonic Frequency:

25kHz

Ultrasonic Pulse intervals:

(1-4 sec/on)-(0.5-2 sec/off)

Electromagnetic Pulse intervals:

(0.5-2 sec/on)-(1-4 sec/ off)

Many pest problems can be solved with a few simple steps:

1. Keep garbage lid closed in the kitchen
2. Store food in airtight containers
3. Pet food and water should be put away overnight
4. Repair plumbing leaks and cracks
5. Drain liquids and wash recycled containers before you recycle them
6. Accumulating paper products such as cardboard boxes, bags, newspapers etc... should be avoided
7. Keep grass short around the foundation of the house and trees/shrubs planted away from the house
8. Screen all vent openings such as crawl spaces, attics or laundry vents
9. Repair and adjust windows and door screens
