

Dan Ewing
Parker Seals, O-Ring Division
Lexington, KY 40512
April 15, 2005

To Whom It May Concern:

The O-Ring lubricants supplied by Parker, O-Lube and Super-O-Lube are **not** age-sensitive materials. Because of the potential for contamination and / or evaporation, these materials should be used within one year of opening. Some customers report that careful handling and use of the product (including resealing the container after each use) will prolong the useful life indefinitely, but, due to the ambiguous nature of the term "careful handling", we cannot guarantee this of any customer.

The presence of any expiration date stamped on a container of either of these lubricants is an attempt to reflect this. These expiration dates are invalid and should be disregarded.

Neither Parker O-Lube nor Super-O-Lube utilize batch numbers or dates of manufacture.

Thank you for your understanding in this matter.

Sincerely,

A handwritten signature in cursive script that reads "Dan Ewing".
