

Your "Total Reading Power" is the combination of your distance correction and the additional magnification power.

Your prescription may look something like this:

OD + 0.50 = (The distance correction that you need for your Right Eye)

OS +0.50 = (The distance correction that you need for your Left Eye)

ADD +2.00 = (The additional magnification that you need for Reading)

Using the sample prescription above, you would order a +2.50 for your Multi-Views.

Your prescription may look something like this:

OD - 0.75 = (The distance correction that you need for your Right Eye)

OS - 0.75 = (The distance correction that you need for your Left Eye)

ADD + 2.50 = (The additional magnification that you need for Reading)

Using the sample prescription above, you would order a + 1.75 for your Multi-Views.

Your prescription may look something like this:

OD Plano = (You do not need distance correction for your Right Eye)

OS Plano = (You do not need distance correction for your Left Eye)

ADD +1.50 = (The additional magnification that you need for Reading)

Using the sample prescription above, you would order a +1.50 for your Multi-Views.

If you wear contact lenses for your distance correction - use the "ADD" power to order your Multi-Views.

If you have been told by your Eye Doctor, that you have an Astigmatism - You may still be a candidate for Multi-View Glasses.

Please call our Toll Free Customer Service Line 1-888-685-8484 to consult with one of our Opticians.

We are happy to help - If you have complicated prescription or a specific focal point that you are working with, It would be our pleasure to help you calculate the correct power to order.
