Centralized Mail Delivery Equipment Guidelines

Centralized mail delivery equipment can be in the form of any "clustered" style of mailboxes including free-standing, pedestal mounted Cluster Box Units (CBU), or other STD-4C compliant cluster mailboxes mounted in a wall, kiosk, or outdoor shelter.

New centralized mail delivery equipment may be required for any major renovation to existing mailbox installations. If the project will disturb the rough opening of the wall in which mailboxes are currently mounted, new centralized mail delivery equipment may be required; otherwise STD-4B+ replacement products (see below) can be used.

It is important to check with local US Postal authorities prior to planning mailbox installations to ensure local requirements and proper placement is included in a final design plan. To find a local Post Office® and/or the proper Postal official, visit www.USPS.com, or call 800-ASK-USPS (800-275-8777).

Replacement or Private Delivery Equipment Options

Older styles of horizontal or vertical mailboxes known as STD-4B+ are still considered USPS Approved when used to replace existing mailboxes - as long as the installation does not disturb the existing wall opening.

This type of centralized mail delivery equipment also lends itself well to those needing private delivery applications - where someone other than a US Postal official places mail into the box.

No matter what your application - replacement, private delivery, or new construction - Florence Manufacturing provides the most extensive solutions for all your centralized mail delivery project needs.

STD-4B+ Horizontal Mailboxes

STD-4B+ Vertical Mailboxes
