

# GARAGE DOOR RADIO CONTROL

## CODING INSTRUCTION

### For model MCT-4

Remove the back cover from the transmitter and the receiver for access to the code switches. Inside is a 8-bits dip switch exposed on the circuit board. Use a pencil or ball-point pen to set the 8-bits dip switch of your choice. But, note that bits numbered 1 and 2 are not operational on the transmitter.

#### TRANSMITTER :

Determine the bits numbered 3 - 8 to ON/OFF position, For example, set bits numbered 3, 5, 6, 8, to ON, numbered 4, 7 to OFF.

#### ASSOCIATED RECEIVERS :

There are 4 coded receivers controllable by this 4-channel transmitter. Set the bits as below :

- a) First, follow same bits numbered 3 - 8 to ON/OFF as the corresponding bits in the transmitter as above example.

- b) Then, set the bits numbered 1 and 2 to fixed position as follows, for matching the transmitter switch button accordingly.

Be sure all are set to the definite code, since a different setting of just one dip switch will prevent operation.
