FALCON
OPENING SENSOR FOR INDUSTRIAL DOORS

DESCRIPTION
The FALCON is a unidirectional microwave motion sensor optimizing the performance of automatic doors. The FALCON detects every type of target and can filter people. Detecting vehicles only allows to reduce the door closing cycle by rejecting cross-traffic.

PERFORMANCE
- Unidirectional motion detection for an optimum door closing cycle generating energy savings.
- Possibility of filtering people and detecting vehicles only.
- Possibility of filtering cross-traffic to eliminate unwanted detection.
- Immunity and stability thanks to the BEA planar antenna and the digital treatment of the signal.
- Sensor performance and precision depend on mounting height:
  FALCON with 9-patch antenna for mounting till 7 m.
  FALCON XL with 3-patch antenna for mounting till 3.5 m.
