

Drag & Drop Layout Designer:

The cloud-based drag and drop layout designer gives the user complete control of their display content from anywhere in the world and at the touch of a button. The intuitive drag and drop style allows users to easily design and configure layouts to suit their needs. Edit an arrow or floor message, update paid advertising, upload informative content, or simply make a design change. No need to download software.

Features:

- Choice of default screen layouts and selections from software library
- User friendly content configuration
- System date/time update and synchronization
- Remote update of displays (internet connection required)

Multimedia Layout Designer:

The Multimedia Layout Designer allows users to configure screen layouts on multimedia LCD displays. This software enables configuration of the elevator position, status information, custom defined messages, and screen layouts. There are many elements of customization available including font, font colors, flipping picture options, and video player via streamed or local files.

Features:

- Choice of default screen layouts and selections from software library
- User friendly multimedia content configuration
- Multimedia content streaming
- System date/time update and synchronization
