Features:
- The Alarm and Junction board provides a simple, fully functional solution to meet the 2010 and 2013 codes
- The code states that each elevator phone needs to check for an active phone line at least once in a 24 hour period
- The RATH® Alarm System checks the complete phone line system from the elevators to the machine room, and from the machine room to the outside world
- If an active phone line is not detected, an audible and visual alarm at the main landing panel is activated
- A key switch is used to silence the audible alarm. If the phone line has not been re-established within a 24 hour period, the audible will resound.
- Requires 24vdc power
- Flush and surface mount plate and back box include: LED, momentary key switch, and labeling
- OEM boards for mounting behind the panel include: LED (requires momentary key switch)
- **Flush or surface mount options:**
  - Mirrored Stainless Steel
  - Brushed Muntz
  - Mirrored Muntz plate
  - Vertical orientation
