

RA-24 Side Wall Shelf Kit

Instruction Directions

Hang the three vertical sections with the top hook on the top rail of the trailer's inside wall in desired location.

Using the predrilled holes screw the rack sections to the trailer inside wall.

The vertical sections each have three levels of receiver slots to accept the shelf brackets. You can make two shelves with the six brackets.

Pick your desired shelf locations and simply slide the shelf brackets into the receiver slots.

The shelf brackets are designed to accept standard 12" x 1" shelving lumber (not included).

Simply insert the cut to size shelving lumber into the shelf brackets and secure with wood screws.

Installation is now complete.
