

Enclosed Trailer Racks Installation Instructions

All of the listed enclosed trailer racks install the same way.

1. Using the top hook on the rack, hang the rack on the top rail of the inside wall of the trailer in desired location.
2. Using the predrilled holes, screw the rack to the trailer's inside wall.
3. If your trailer has thin luan walls, you may want to use a self tapping screw into one of the metal wall stud.
4. If your trailer has plywood walls, wood screws are sufficient.

Note: be sure to use screws short enough so as to not pierce through the outer skin of your trailer.

Installation is now complete.
