INSTRUCTIONS FOR CONNECTING A 240 VOLT 3-WIRE METER
USED ON A 120 VOLT 2-WIRE CIRCUIT

FRONT VIEW OF SOCKET

"HOT" LINE

NEUTRAL LINE

GRD SCREW

This wire must be the same size as the line and load wires.

HOT LOAD TO RECEPTACES

NEUTRAL LOAD TO RECEPTACES

REAR VIEW OF METER

NEUTRAL CONNECTION FROM SOCKET
If line neutral is connected to ground screw, it is OK to connect this wire there also. Otherwise this connection must be made to neutral at some other point.

Suggestion:
The neutral terminal in the Power Outlet Box, or neutral terminal on the receptacle.

NEUTRAL CONNECTION TO REAR OF METER
Loosen screws and slide clip open as far as possible. Connect a small flexible wire (Wire size #18-22) to the screw on which the clip remains when opened.

WARNING!
Connecting this wire to the wrong screw will trip site breaker, or cause a flash, if not protected by a site breaker.

Note: Some clips are vertical instead of horizontal as shown here.
